

From an empty screen to a sent email

Five steps. The AI finds and ranks people worth contacting — you decide who's actually worth it, and approve every message before it goes.

Set target → Find leads → Review → Write → Send

1

Tell it who you're looking for

Top bar → FINDING:

Click the target name in the header. Describe your ideal customer in plain language — industry, location, company size, the job titles you sell to, and what they'd be buying or hiring for.

Pick a template to start from if it's close enough, then edit. Hit **Save & find leads**.

You only do this once per customer type. Save several and switch between them from the same dropdown.

2

Let it go find them

Top right → Find Leads

The engine searches the open web, LinkedIn company and people pages, news coverage, and job boards — then cross-references what it finds against your target.

A progress bar tracks it. Expect **3–7 minutes** for a batch of about 10 leads. You can keep working while it runs.

Every lead gets scored **0–100** on five dimensions and sorted into a tier:

HOT · 70–100

WARM · 40–69

COLD · 0–39

3

Decide who's worth contacting

Tab → **Lead Intelligence Feed**

This is the part only you can do. Each card shows the company, the buyer, the score, and where it was found. Click any card to open the full profile — score breakdown, the exact signals that flagged them, and contact details.

Then choose one of three:

- **Accept** — worth an email. Moves to your outreach queue.
- **Hold** — maybe later. Stays out of your way.
- **Reject** — not a fit. Gone from the queue.

In a hurry? Tick the checkboxes on several cards and act on them together, or use **Select all Hot** and accept the whole tier in one click.

Narrow the list first. The left sidebar filters by tier, channel, industry, company size, review status, and when the lead was found. Reviewing 20 Hot leads beats scrolling 500.

4

Get the first message written

Tab → **Outreach** → **Ready to contact**

Everything you accepted is waiting here. Click **Generate message** on any lead and the composer opens with their details already loaded. You have two ways to write it:

Generate with AI **BUILT IN**

Writes a draft in about 10 seconds, right in the composer. Nothing to set up.

Open in Gemini **NO API KEY**

Copies the full prompt and opens Gemini under your own Google login. Paste, let it write, paste the result back.

Either way the draft is built from that specific lead — their name, role, company, and the actual signal that surfaced them, so it doesn't read like a template.

Always read it before sending. The AI gets the opening right and the ask roughly right. You know your business — fix the ask.

Happy with how one turned out? Save it as a template and reuse it; it re-personalises itself for each new lead.

Send it

Composer → **Send now** or **Schedule**

Send now asks you to confirm the recipient, then delivers it. **Schedule** lets you pick a time — useful for landing on a Tuesday morning instead of a Friday night.

No mail server set up yet? The **Gmail** and **Mail app** buttons open your normal mail client with everything pre-filled instead.

Everything sent is recorded in **Sent log** — who, what, and when.

When someone replies

Paste their reply into the reply scanner on the Outreach tab. If it's an opt-out — "unsubscribe", "not interested", "remove me" — that person is added to your suppression list and can never be contacted again, including by anything already scheduled.

It reads only what they actually wrote, ignoring the quoted copy of your own email underneath, so a friendly reply that happens to quote your footer isn't mistaken for a rejection.

What stops you making a mistake

- ✓ Nothing ever sends itself — every message needs your click
- ✓ A confirm dialog names the recipient before anything leaves
- ✓ The suppression list is checked before every send, scheduled ones included
- ✓ Caps at 200 emails a day, and 50 per bulk send
- ✓ Every email carries an unsubscribe option automatically

If something looks wrong

WHAT YOU SEE

WHAT TO DO

No leads after a run

A source was probably rate-limited. Run it again, or widen the target — very narrow industries and locations find little.

Lead has no email address

Not every company publishes one. Use the LinkedIn link on the card, or add the address yourself in the composer.

The draft feels generic

Set `OUTREACH_VALUE_PROP` in the config to one line describing what you sell. Without it the AI genuinely doesn't know.

Send now does nothing

Mail credentials aren't configured yet. Use the Gmail button meanwhile.

A lead you rejected reappears

It doesn't — rejected leads are hidden from the queue but kept, so you can find them again with the review-status filter.
